

AI-Ready Context Package

Purpose: Prepare an onboarding AI for a small accounting office.

Sources: contracts, payroll checklist, fee table, yearly adjustment notices.

Output: usable sources, excluded sources, missing knowledge, and questions

Package sections

1. AI-ready sources
2. Exclusions
3. Missing knowledge
4. Human questions

Safety Boundary and Masking

Cloud-managed profile receives raw files in Cloud Run, stores raw objects in GCS, and writes metadata/chunks to Firestore.

Cloud DLP and Masker replace PII before downstream AI use.

Restricted material remains human review only.

Stage	Boundary	Evidence
Ingress	tenant-cloud	raw object path
Masking	post-ingress	ruleSetVersion
Export	shared-cloud	purposeBinding

What the Human Owner Confirms

Confirm whether the latest payroll exception rules are authoritative.

Confirm whether synthetic customer identifiers can be used in examples.

Confirm whether outdated fee tables should be excluded from the package.

Human review

Restricted or stale material stays outside the AI-ready source bundle.
